TEACHER QUICK START

Your courses. Your exams. Your teaching workspace.

Step-by-step guide for Adrian B. | Teacher sign-in: **adrian.b@bu.ac.th**

Use your Bangkok University Google account and choose Teacher at sign-in. Courses, question bank, classrooms, exams, rosters, and reports are scoped to your teacher account.

1. Sign in

01 **Open SecureExam Pro**
Go to the website and choose **Teacher** on the role switch.

02 **Continue with Google**
Click **Continue with Google** and choose the verified account adrian.b@bu.ac.th.

03 **Confirm access**
After first successful sign-in, the teacher workspace opens. If access is denied, confirm the Google account and contact the workspace administrator.

Workspace separation

Teachers see and manage their own courses, questions, classrooms, exams, rosters, submissions, and related activity. Another teacher cannot open or edit your course or exam by guessing its link. Student identities are university-wide; a student may enroll in multiple teachers' courses, but each teacher sees them only in that teacher's own rosters and activity. Institution-level branding and administrator settings are shared.

First visit: if access was just enabled, sign in once with the exact Google account above. Google-only accounts do not receive a separate app password.

2. Create a course and invite students

01 **Open Students & courses**
Choose the course management page in the teacher navigation.

02 **Create your course**
Select **Add course**. Enter the course code, course name, and section, then save.

03 **Share the course QR**
Open your course and show or copy its enrollment QR code. Students scan it while signed in to their approved student account; the QR enrolls them in this course only.

04 **Check the roster**
Open the course roster to confirm enrollment. Removing a student removes them from your course, not their university account.

3. Create questions and exams

01 **Build your question bank**
Open **Question bank**, select the question type, and enter prompt, marks, options or rubric, and answer key where supported. Review imported or AI-generated content before saving.

02 **Create an exam**
Open **Examinations** and choose **Create examination**. Enter a title, select one of your courses, set open/close times, duration, and passing score.

03 **Set room and checks**
Select a classroom for location verification if needed. Enable only the additional checks required for this exam and review the student instructions.

04 **Add the paper**
Add questions from your bank, format/import material, check each question and mark, and upload any supporting files.

05 **Save and publish**
Save the draft. Recheck the schedule, questions, instructions, and checks, then publish or schedule it.

During and after

Use the exam controls to view check-in details, pause or close, extend time, and release results. Open the exam's monitoring and report tabs to review attempts, submissions, and scores.

4. Monitoring, warnings, and student requests

01 **Live monitoring**
Open **Live monitoring** to view active attempts and signals. Select a student to review the available details for that exam.

02 **Review evidence**
Open **Login & audit** or **Action center**. Expand the exam, date, and student, then inspect timestamped events. If Drive archive is configured, the evidence link appears with the warning. Signals need instructor review; they are not a verdict.

03 **Approve requests**
Open **Student requests**, select the course, inspect the student and exam details, then approve or decline. Confirm the exam context before approval.

04 **Grade and release**
Open the exam report, inspect answers and submitted work, enter marks or feedback, then release results when ready.

Evidence and retention

Warning evidence may be kept in app storage and, when Google Drive archiving is configured, linked from the warning. If archiving fails, use the retry/save control and contact the administrator if it keeps failing. Follow the retention period shown in the website privacy notice.

5. Exam-day checklist

WHEN	ACTION
Before publishing	Confirm course, schedule, duration, questions, answers, marks, classroom, and checks.
Before students arrive	Show enrollment/check-in instructions and the rotating room code if enabled.
At exam start	Keep Live monitoring open and review entry or re-entry requests.
When warned	Review student, timestamp, and evidence. Add a note when appropriate.
After exam	Review submissions, grade, handle appeals, and release results when approved.

Quick troubleshooting

Teacher sign-in denied

Choose Teacher and the exact Google account adrian.b@bu.ac.th. If access was just granted, sign out and sign in again.

Course list is empty

Create a course under Students & courses. Other teachers' courses are hidden from your workspace.

Student cannot see exam

Confirm course enrollment, eligibility, exam publication, and schedule.

Location check fails

Check classroom pin/radius and browser location permission. Indoor GPS can be imprecise; have the student retry with location enabled.

No Drive evidence link

Use the retry/save control. If it still fails, ask the administrator to check the Drive connection.

Support

For access or persistent issues, contact the workspace administrator. Include course code, exam title, relevant student ID, and the displayed error. Never share a Google password or authenticator code.
